Crop Responses and Adaptations to Temperature Stress: New Insights and Approaches

Crop Responses and Adaptations to Temperature Stress: New Insights and Approaches

Examine the ways in which various plants respond when exposed to high and low temperatures! The growing demand for food makes breeding for high-yielding crops with built-in resistance against environmental constraints one of the most important challenges for plant breeders today. *Crop Responses and Adaptations to Temperature Stress* investigates the adaptive mechanisms plants have evolved in response to unfavorable temperature conditions. It describes gene transfer technology and other tolerance improvement techniques that aid in developing stress-tolerant plants. Adverse environmental stress conditions, such as extreme temperatures, affect the productivity of important world food crops by inhibiting plant growth and development. *Crop Responses and Adaptations to Temperature Stress* provides valuable information on the mechanisms of stress tolerance in plants that encourage growth and enhance yield performance. Agriculture professionals, researchers, and plant breeders will benefit from the ideas shared on such topics as:

- mechanisms of chilling injury and tolerance
- injury and acclimation of root system functions during chilling temperatures
- mechanisms of cold acclimation
- signal transduction under low-temperature stress
- mechanisms of thermotolerance in crops
- control of the heat shock response in crop plants
- the effects of heat stress on cereal yield and quality

In addition to a detailed review of current knowledge on the molecular biology of plant responses to temperature stress and an introduction to biotechnological advances in improving crop tolerance, *Crop Responses and Adaptations to Temperature Stress* suggests avenues for further study and speculates on the implications of such work for the future of food production.

From reader reviews:

David Butler:

Now a day individuals who Living in the era wherever everything reachable by connect to the internet and the resources in it can be true or not demand people to be aware of each info they get. How people have to be smart in acquiring any information nowadays? Of course the answer is reading a book. Reading through a book can help men and women out of this uncertainty Information particularly this Crop Responses and Adaptations to Temperature Stress: New Insights and Approaches book because this book offers you rich info and knowledge. Of course the data in this book hundred percent guarantees there is no doubt in it you know.

Michael Hamlin:

Information is provisions for anyone to get better life, information nowadays can get by anyone from everywhere. The information can be a knowledge or any news even a concern. What people must be consider any time those information which is in the former life are difficult to be find than now is taking seriously which one is appropriate to believe or which one the particular resource are convinced. If you receive the unstable resource then you obtain it as your main information you will see huge disadvantage for you. All of those possibilities will not happen inside you if you take Crop Responses and Adaptations to Temperature Stress: New Insights and Approaches as the daily resource information.

Mary Bunnell:

As a university student exactly feel bored in order to reading. If their teacher questioned them to go to the library or make summary for some book, they are complained. Just very little students that has reading's heart and soul or real their leisure activity. They just do what the professor want, like asked to the library. They go to right now there but nothing reading significantly. Any students feel that looking at is not important, boring and also can't see colorful photographs on there. Yeah, it is being complicated. Book is very important in your case. As we know that on this age, many ways to get whatever we would like. Likewise word says, ways to reach Chinese's country. Therefore this Crop Responses and Adaptations to Temperature Stress: New Insights and Approaches can make you sense more interested to read.

Judith Mandel:

What is your hobby? Have you heard this question when you got college students? We believe that that question was given by teacher to the students. Many kinds of hobby, Everyone has different hobby. And you also know that little person such as reading or as examining become their hobby. You need to know that reading is very important and also book as to be the point. Book is important thing to include you knowledge, except your personal teacher or lecturer. You find good news or update with regards to something by book. Amount types of books that can you choose to use be your object. One of them is actually Crop Responses and Adaptations to Temperature Stress: New Insights and Approaches.
