Energetic Materials, Volume 13: Part 2. Detonation, Combustion (Theoretical and Computational Chemistry) (Pt. 2)

Energetic Materials, Volume 13: Part 2. Detonation, Combustion (Theoretical and Computational Chemistry) (Pt. 2)

This volume provides an overview of current research and recent advances in the area of energetic materials, focusing on explosives and propellants. The contents and format reflect the fact that theory, experiment and computation are closely linked in this field.

The challenge of developing energetic materials that are less sensitive to accidental stimuli continues to be of critical importance. This volume opens with discussions of some determinants of sensitivity and its correlations with various molecular and crystal properties. The next several chapters deal in considerable detail with different aspects and mechanisms of the initiation of detonation, and its quantitative description. The second half of this volume focuses upon combustion. Extensive studies model ignition and combustion, with applications to different propellants. The final chapter is an exhaustive computational treatment of the mechanism and kinetics of combustion initiation reactions of ammonium perchlorate.

Overall, this volume illustrates the progress that has been made in the field of energetic materials and some of the areas of current activity. It also indicates the challenges involved in characterizing and understanding the properties and behaviour of these compounds. The work is a unique state-of-the-art treatment of the subject, written by pre-eminent researchers in the field.

- Overall emphasis is on theory and computation, presented in the context of relevant experimental work
- Presents a unique state-of-the-art treatment of the subject
- Contributors are preeminent researchers in the field

From reader reviews:

Mary Ponce:

In this 21st millennium, people become competitive in every single way. By being competitive at this point, people have to do something to make all of them survive, being in the middle of typically the crowded place and notice through surrounding. One thing that at times many people have underestimated that for a while is reading. Yep, by reading a guide your ability to survive rises then having a chance to stand than other is high. In your case who want to start reading the book, we give you that Energetic Materials, Volume 13: Part 2. Detonation, Combustion (Theoretical and Computational Chemistry) (Pt. 2) book as a starter and daily reading e-book. Why, because this book is usually more than just a book.

Dolores Wade:

People live in this new moment of lifestyle always aim to and must have the extra time or they will get a lot of stress from both everyday life and work. So, whenever we ask do people have spare time, we will say absolutely indeed. People is human not only a robot. Then we question again, what kind of activity do you possess when the spare time coming to a person of course your answer will be unlimited right. Then do you try this one, reading guides. It can be your alternative within spending your spare time, the actual book you have read is definitely Energetic Materials, Volume 13: Part 2. Detonation, Combustion (Theoretical and Computational Chemistry) (Pt. 2).

Patricia Ackermann:

Your reading 6th sense will not betray you, why because this Energetic Materials, Volume 13: Part 2. Detonation, Combustion (Theoretical and Computational Chemistry) (Pt. 2) guide written by well-known writer who knows well how to make a book that may be understood by anyone who all read the book. Written in good manner for you, leaving every idea and creating skill only for eliminate your own hunger then you still doubt Energetic Materials, Volume 13: Part 2. Detonation, Combustion (Theoretical and Computational Chemistry) (Pt. 2) as a good book not merely by the cover but also by the content. This is one book that can break don't assess a book by its protect, so do you still needing one more sixth sense to pick this particular!? Oh come on your examining sixth sense already alerted you so why you have to listening to another sixth sense.

Karin Decker:

Beside this Energetic Materials, Volume 13: Part 2. Detonation, Combustion (Theoretical and Computational Chemistry) (Pt. 2) in your phone, it could possibly give you a way to get more close to the new knowledge or data. The information and the knowledge you might get here is fresh from oven so don't become worry if you feel like an older people live in narrow community. It is a good thing to have Energetic Materials, Volume 13: Part 2. Detonation, Combustion (Theoretical and Computational Chemistry) (Pt. 2) because this book offers to you readable information. Do you often have a book but you seldom get what it's exactly about. Oh

come on, that wil happen if you have this in your hand. The Enjoyable option here cannot be questionable, just like treasuring beautiful island. So do you still want to miss that? Find this book in addition to read it from now!
