This volume provides data on aldehydes, acids, alcohols, ketones, ethers, formates, acetates, glycols, amines, formamides, acetamides and nitriles. Extensive data derived from the literature and detailed information are combined in one source. Data on physical properties, vapour pressure, heat of vaporization, liquid density, surface tension, heat capaciy, viscosity, thermal conductivity, enthalpy of formation and Gibb's free energy of formation are presented in graphical form for each compound. Also, boiling and freezing points, molecular weight, critical properties, explosion limits in air and solubility in water are listed for each compound. The SI and metric units are used for all properties except vapour pressure, and each graph displays a conversion factor providing English units. Comprehensive appendices feature conversion tables and indexes to compounds by formula and by name.
