Thomas H. Otway

Elliptic-Hyperbolic Partial Differential Equations: A Mini-Course in Geometric and Quasilinear Methods (SpringerBriefs in Mathematics) Thomas H. Otway

This text is a concise introduction to the partial differential equations which change from elliptic to hyperbolic type across a smooth hypersurface of their domain. These are becoming increasingly important in diverse sub-fields of both applied mathematics and engineering, for example:

- The heating of fusion plasmas by electromagnetic waves
- The behaviour of light near a caustic
- Extremal surfaces in the space of special relativity
- The formation of rapids; transonic and multiphase fluid flow
- The dynamics of certain models for elastic structures
- The shape of industrial surfaces such as windshields and airfoils
- Pathologies of traffic flow
- Harmonic fields in extended projective space

They also arise in models for the early universe, for cosmic acceleration, and for possible violation of causality in the interiors of certain compact stars. Within the past 25 years, they have become central to the isometric embedding of Riemannian manifolds and the prescription of Gauss curvature for surfaces: topics in pure mathematics which themselves have important applications.

Elliptic-Hyperbolic Partial Differential Equations is derived from a mini-course given at the ICMS Workshop on Differential Geometry and Continuum Mechanics held in Edinburgh, Scotland in June 2013. The focus on geometry in that meeting is reflected in these notes, along with the focus on quasilinear equations. In the spirit of the ICMS workshop, this course is addressed both to applied mathematicians and to mathematically-oriented engineers. The emphasis is on very recent applications and methods, the majority of which have not previously appeared in book form.

From reader reviews:

Richard Martinez:

Now a day people who Living in the era wherever everything reachable by interact with the internet and the resources within it can be true or not demand people to be aware of each information they get. How many people to be smart in obtaining any information nowadays? Of course the answer then is reading a book. Studying a book can help men and women out of this uncertainty Information specifically this Elliptic-Hyperbolic Partial Differential Equations: A Mini-Course in Geometric and Quasilinear Methods (SpringerBriefs in Mathematics) book as this book offers you rich details and knowledge. Of course the data in this book hundred per cent guarantees there is no doubt in it you know.

Lacie Young:

The event that you get from Elliptic-Hyperbolic Partial Differential Equations: A Mini-Course in Geometric and Quasilinear Methods (SpringerBriefs in Mathematics) will be the more deep you excavating the information that hide in the words the more you get considering reading it. It does not mean that this book is hard to comprehend but Elliptic-Hyperbolic Partial Differential Equations: A Mini-Course in Geometric and Quasilinear Methods (SpringerBriefs in Mathematics) giving you excitement feeling of reading. The article writer conveys their point in particular way that can be understood by anyone who read this because the author of this reserve is well-known enough. This kind of book also makes your own vocabulary increase well. It is therefore easy to understand then can go along with you, both in printed or e-book style are available. We suggest you for having this specific Elliptic-Hyperbolic Partial Differential Equations: A Mini-Course in Geometric and Quasilinear Methods (SpringerBriefs in Mathematics) instantly.

Lou Marshall:

Reading a guide can be one of a lot of pastime that everyone in the world enjoys. Do you like reading book consequently. There are a lot of reasons why people enjoyed. First reading a guide will give you a lot of new data. When you read a e-book you will get new information due to the fact book is one of many ways to share the information as well as their idea. Second, looking at a book will make you actually more imaginative. When you reading through a book especially fictional works book the author will bring you to definitely imagine the story how the personas do it anything. Third, you could share your knowledge to other individuals. When you read this Elliptic-Hyperbolic Partial Differential Equations: A Mini-Course in Geometric and Quasilinear Methods (SpringerBriefs in Mathematics), you could tells your family, friends in addition to soon about yours reserve. Your knowledge can inspire others, make them reading a guide.

Aurora Ammon:

This Elliptic-Hyperbolic Partial Differential Equations: A Mini-Course in Geometric and Quasilinear Methods (SpringerBriefs in Mathematics) is great guide for you because the content that is full of information for you who also always deal with world and get to make decision every minute. This book

reveal it info accurately using great coordinate word or we can claim no rambling sentences inside it. So if you are read the item hurriedly you can have whole data in it. Doesn't mean it only will give you straight forward sentences but difficult core information with lovely delivering sentences. Having Elliptic-Hyperbolic Partial Differential Equations: A Mini-Course in Geometric and Quasilinear Methods (SpringerBriefs in Mathematics) in your hand like keeping the world in your arm, facts in it is not ridiculous just one. We can say that no publication that offer you world in ten or fifteen minute right but this e-book already do that. So , this is good reading book. Hi Mr. and Mrs. active do you still doubt in which?
