Acoustical and Environmental Robustness in Automatic Speech Recognition (The Springer International Series in Engineering and Computer Science) Alex Acero

The need for automatic speech recognition systems to be robust with respect to changes in their acoustical environment has become more widely appreciated in recent years, as more systems are finding their way into practical applications. Although the issue of environmental robustness has received only a small fraction of the attention devoted to speaker independence, even speech recognition systems that are designed to be speaker independent frequently perform very poorly when they are tested using a different type of microphone or acoustical environment from the one with which they were trained. The use of microphones other than a "close talking" headset also tends to severely degrade speech recognition performance. Even in relatively quiet office environments, speech is degraded by additive noise from fans, slamming doors, and other conversations, as well as by the effects of unknown linear filtering arising from reverberation from surface reflections in a room, or spectral shaping by microphones or the vocal tracts of individual speakers. Speech-recognition systems designed for long-distance telephone lines, or applications deployed in more adverse acoustical environments such as motor vehicles, factory floors, or outdoors demand far greater degrees of environmental robustness. There are several different ways of building acoustical robustness into speech recognition systems. Arrays of microphones can be used to develop a directionally-sensitive system that resists interference from competing talkers and other noise sources that are spatially separated from the source of the desired speech signal.

From reader reviews:

Michael Decker:

As people who live in the actual modest era should be change about what going on or info even knowledge to make these people keep up with the era that is certainly always change and move forward. Some of you maybe will update themselves by studying books. It is a good choice for yourself but the problems coming to you is you don't know what one you should start with. This Acoustical and Environmental Robustness in Automatic Speech Recognition (The Springer International Series in Engineering and Computer Science) is our recommendation so you keep up with the world. Why, because book serves what you want and need in this era.

Irene Forrest:

Now a day people who Living in the era wherever everything reachable by interact with the internet and the resources in it can be true or not need people to be aware of each information they get. How individuals to be smart in receiving any information nowadays? Of course the answer is reading a book. Looking at a book can help people out of this uncertainty Information mainly this Acoustical and Environmental Robustness in Automatic Speech Recognition (The Springer International Series in Engineering and Computer Science) book as this book offers you rich facts and knowledge. Of course the data in this book hundred per cent guarantees there is no doubt in it you probably know this.

Michael Slay:

Typically the book Acoustical and Environmental Robustness in Automatic Speech Recognition (The Springer International Series in Engineering and Computer Science) will bring someone to the new experience of reading any book. The author style to elucidate the idea is very unique. In case you try to find new book to see, this book very suited to you. The book Acoustical and Environmental Robustness in Automatic Speech Recognition (The Springer International Series in Engineering and Computer Science) is much recommended to you to see. You can also get the e-book from your official web site, so you can more easily to read the book.

Mary Adamczyk:

Guide is one of source of understanding. We can add our know-how from it. Not only for students and also native or citizen have to have book to know the revise information of year to help year. As we know those guides have many advantages. Beside most of us add our knowledge, could also bring us to around the world. From the book Acoustical and Environmental Robustness in Automatic Speech Recognition (The Springer International Series in Engineering and Computer Science) we can consider more advantage. Don't that you be creative people? To become creative person must like to read a book. Just simply choose the best book that ideal with your aim. Don't become doubt to change your life by this book Acoustical and Environmental Robustness in Automatic Speech Recognition (The Springer International Series in

Engineering and Computer Science). You can more appealing than now.
