Motor Control: Theories, Experiments, and Applications

Frederic Danion PhD, Mark Latash PhD

Motor Control: Theories, Experiments, and Applications Frederic Danion PhD, Mark Latash PhD
Motor control has established itself as an area of scientific research characterized by a multi-disciplinary approach. Scientists working in the area of control of voluntary movements come from different backgrounds including but not limited to physiology, physics, psychology, mathematics, neurology, physical therapy, computer science, robotics, and engineering. One of the factors slowing progress in the area has been the lack of communication among researchers representing all these disciplines. A major objective of the current book is to overcome this deficiency and to promote cooperation and mutual understanding among researchers addressing different aspects of the complex phenomenon of motor coordination. The book offers a collection of chapters written by the most prominent researchers in the field. Despite the variety of approaches and methods, all the chapters are united by a common goal: To understand how the central nervous system controls and coordinates natural voluntary movements. This book will be appreciated as a major reference by researchers working in all the subfields that form motor control. It can also be used as a supplementary reading book for graduate courses in such fields as kinesiology, physiology, biomechanics, psychology, robotics, and movement disorders.

In one concise volume, *Motor Control* presents the diversity of the research performed to understand human movement. Deftly organized into 6 primary sections, the editors, Dr Frédéric Danion and Dr Mark Latash, have invited the who's who of specialists to write on: *MotorControl: Control of a Complex; Cortical Mechanisms of Motor Control; Lessons from Biomechanics; Lessons from Motor Learning and Using Tools; Lessons from Studies of Aging and MotorDisorders; and Lessons from Robotics*

Motor Control will quickly become the go-to reference for researchers in this growing field. Researchers from mechanics and engineering to psychology and neurophysiology, as well as clinicians working in motor disorders and rehabilitation, will be equally interested in the pages contained herein.

From reader reviews:

Arthur Bennett:

Now a day people that Living in the era where everything reachable by match the internet and the resources within it can be true or not call for people to be aware of each details they get. How people have to be smart in getting any information nowadays? Of course the correct answer is reading a book. Studying a book can help men and women out of this uncertainty Information mainly this Motor Control: Theories, Experiments, and Applications book because this book offers you rich facts and knowledge. Of course the info in this book hundred % guarantees there is no doubt in it you may already know.

Scott Bourquin:

This book untitled Motor Control: Theories, Experiments, and Applications to be one of several books in which best seller in this year, here is because when you read this e-book you can get a lot of benefit onto it. You will easily to buy that book in the book shop or you can order it through online. The publisher of this book sells the e-book too. It makes you more easily to read this book, as you can read this book in your Smartphone. So there is no reason for you to past this reserve from your list.

Diane McCarthy:

Reading a book tends to be new life style on this era globalization. With studying you can get a lot of information that may give you benefit in your life. Together with book everyone in this world can easily share their idea. Publications can also inspire a lot of people. Lots of author can inspire their own reader with their story or maybe their experience. Not only the storyline that share in the books. But also they write about the knowledge about something that you need case in point. How to get the good score toefl, or how to teach your kids, there are many kinds of book that you can get now. The authors in this world always try to improve their proficiency in writing, they also doing some exploration before they write with their book. One of them is this Motor Control: Theories, Experiments, and Applications.

Clara Brownfield:

Is it you who having spare time in that case spend it whole day through watching television programs or just lying down on the bed? Do you need something totally new? This Motor Control: Theories, Experiments, and Applications can be the response, oh how comes? A book you know. You are consequently out of date, spending your extra time by reading in this fresh era is common not a nerd activity. So what these textbooks have than the others?
