Introduction to Nonlinear Dispersive Equations (Universitext) Felipe Linares, Gustavo Ponce

This textbook introduces the well-posedness theory for initial-value problems of nonlinear, dispersive partial differential equations, with special focus on two key models, the Korteweg–de Vries equation and the nonlinear Schrödinger equation. A concise and self-contained treatment of background material (the Fourier transform, interpolation theory, Sobolev spaces, and the linear Schrödinger equation) prepares the reader to understand the main topics covered: the initial-value problem for the nonlinear Schrödinger equation and the generalized Korteweg–de Vries equation, properties of their solutions, and a survey of general classes of nonlinear dispersive equations of physical and mathematical significance. Each chapter ends with an expert account of recent developments and open problems, as well as exercises. The final chapter gives a detailed exposition of local well-posedness for the nonlinear Schrödinger equation, taking the reader to the forefront of recent research.

The second edition of *Introduction to Nonlinear Dispersive Equations* builds upon the success of the first edition by the addition of updated material on the main topics, an expanded bibliography, and new exercises. Assuming only basic knowledge of complex analysis and integration theory, this book will enable graduate students and researchers to enter this actively developing field.

From reader reviews:

Denise Welton:

The particular book Introduction to Nonlinear Dispersive Equations (Universitext) has a lot of information on it. So when you check out this book you can get a lot of benefit. The book was compiled by the very famous author. Mcdougal makes some research just before write this book. This particular book very easy to read you can obtain the point easily after perusing this book.

Millard Espinoza:

Playing with family in the park, coming to see the ocean world or hanging out with pals is thing that usually you might have done when you have spare time, subsequently why you don't try matter that really opposite from that. One activity that make you not sensation tired but still relaxing, trilling like on roller coaster you are ride on and with addition info. Even you love Introduction to Nonlinear Dispersive Equations (Universitext), you could enjoy both. It is fine combination right, you still desire to miss it? What kind of hang-out type is it? Oh occur its mind hangout people. What? Still don't have it, oh come on its referred to as reading friends.

Bryon Diaz:

This Introduction to Nonlinear Dispersive Equations (Universitext) is great book for you because the content which is full of information for you who also always deal with world and get to make decision every minute. That book reveal it info accurately using great plan word or we can claim no rambling sentences inside. So if you are read that hurriedly you can have whole data in it. Doesn't mean it only offers you straight forward sentences but hard core information with attractive delivering sentences. Having Introduction to Nonlinear Dispersive Equations (Universitext) in your hand like having the world in your arm, information in it is not ridiculous a single. We can say that no e-book that offer you world throughout ten or fifteen tiny right but this guide already do that. So , this is good reading book. Hello Mr. and Mrs. active do you still doubt that will?

Jesse Hooker:

The book untitled Introduction to Nonlinear Dispersive Equations (Universitext) contain a lot of information on that. The writer explains the girl idea with easy means. The language is very clear and understandable all the people, so do not really worry, you can easy to read that. The book was written by famous author. The author will bring you in the new period of literary works. It is possible to read this book because you can keep reading your smart phone, or model, so you can read the book throughout anywhere and anytime. If you want to buy the e-book, you can available their official web-site in addition to order it. Have a nice learn.
