Emerging Threats to Energy Security and Stability: Proceedings of the NATO Advanced Research Workshop on Emerging Threats to Energy Security and ... (Nato Security through Science Series C:)

Emerging Threats to Energy Security and Stability January 23 to January 25, 2004, Windsor Castle, UK This two-day NATO-sponsored workshop was organised by the Windsor Energy Group and MEC International Ltd with support from NATO's Science Committee. The workshop was designed to promote a public-private sector exchange on how best to address issues arising in energy security at a time of growing uncertainty. In particular, it sought to assess emerging threats to energy security and stability and discuss new security strategies to protect global energy supplies from regional instability and terrorism. The format involved a wide-ranging international group of poli- formers and advisers from NATO, Partner and other countries, in a unique forum for intensive expert discussion. Background The international community is increasingly conscious of the need to develop new energy security strategies in order to protect global energy supplies from regional instability and terrorism. Energy security is a vital element in international stability. However, a variety of energy-related economic, technical, and military/political factors pose serious challenges to the international community's pursuit of energy security and stability: The global economy is expected to continue to be largely dependent on oil and gas for the next twenty to thirty years. Current levels of production may need to be doubled in this period, with most of the increment coming from the Gulf States who control 66% of global oil reserves and 40% of global natural gas reserves. There are forecasts of significant capacity shortfalls.
